

PARKER-HALE MODEL P.H.25B APERTURE BACKSIGHT
and
PARKER-HALE MODEL P.H.1 TUNNEL FORESIGHT
for
THE B.S.A. "MARTINI-INTERNATIONAL" Mk. II MATCH RIFLE

This special sighting equipment was designed specifically for use with the B.S.A. "Martini-International Mk. II" .22 match rifle to enable the accuracy of this fine new rifle to be fully exploited. The Model 25B Backsight embodies all the features of its well known predecessors, standard elevation and windage scales with zero setting are provided; also quarter minute clicking heads, which, with the aid of a vernier scale enable readings to be taken to quarter "sight minutes."

The Model P.H.1 foresight has been developed from the Model 2, but embodies such useful features as greater tunnel length-to-bore ratio and anti-glare front with restricting aperture to give visual acuity.
